

STANDARD Q**Filiriasis Ab**  **SD BIOSENSOR**

Filariasis is an infectious tropical disease caused by any one of several thread-like parasitic round worms. The two species of worms most often associated with this disease are *Wuchereria bancrofti* and *Brugia malayi*. The larval form of the parasite transmits the disease to humans by the bite of a mosquito. STANDARD Q Filiriasis Ab performs qualitative analysis by detecting antibodies specific to *Wuchereria bancrofti* and *Brugia malayi* in serum, plasma and whole blood using immunochromatography. With a simple test method, with its high sensitivity and specificity, the screening test result can be obtained within 10 minutes.

GENERAL INFORMATION:

- Easy to use, Easy to read and interpret
- Room temperature storage

**Specification**

Specimen	Serum/Plasma/Whole Blood
Test Time	10 mins. (Do not read after 20 mins.)
Specimen Volume	75µl
Storage Temperature	2-40°C / 36-104°F
